Dipesh Jung Pandey is a versatile entrepreneur and engineer with a passion for harnessing Artificial Intelligence to drive transformative impact across diverse domains. As the Founder and CEO of Symbiosis Solutions, he leads initiatives that empower individuals and organizations with AI literacy and innovative solutions, championing the safe and responsible adoption of AI worldwide.

Education

2018 – 2021

First Class Honours, BSc. Computing

Islington College - Kathmandu, Nepal

Professional Experience

Symbiosis Solutions, Kathmandu, Nepal

Founder, CEO, Aug 2023 – Present

- Organized over 10 AI literacy workshops for teachers across Nepal, focusing on responsible use of AI tools for education and equipping them with practical skills for classroom application.
- Pioneered Nepal's first workshop on AI for Mental Health, facilitating dialogue on opportunities and risks of AI use in therapy and emotional well-being support.
- Designed and piloted Ask Buddha, an AI persona program that introduces middle-grade students to the life and teachings of Buddha through interactive, responsible AI use.
- Led the AI Winter Bootcamp for Young Innovators at AVM, guiding middle-school students in building and interacting with custom chatbots while reflecting on inclusivity and ethical AI use.
- Developed and delivered bachelor-level AI Engineering workshops to over 200 students, integrating hands-on AI learning with emphasis on responsible innovation.
- Designed and implemented Coshikshya, an AI toolkit that supports teachers in lesson planning and assessment while encouraging responsible AI use in academic contexts.
- Delivered keynote speeches and participated in international forums to advocate for ethical AI in education, and regularly contributed to AI learning opportunities through academy collaborations.

Fusemachines, Kathmandu, Nepal

Software Engineer, Jun 2021 – May 2023

- Designed and built a middleware service using FastAPI for an AI-powered chatbot that specializes in answering COVID-19 related queries from reliable sources and platforms.
- Developed a content management system (CMS) using Django for an AI chatbot. With this system, human intervention and supervision of AI responses and behavior was made possible in real-time.
- Developed data pipelines for web3/blockchain data to enable data-driven analysis of NFT projects.
- Planned and implemented data analysis and visualization of web3 data and site performance metrics for large-scale global organizations using AWS QuickSight and Athena. The insights and recommendations obtained from the analysis helped enhance performance and make data-driven decisions.
- Followed best practices of agile development methodologies to deliver high-quality features in short iterations and increase client satisfaction.

Nochini, Kathmandu, Nepal

Chief Information Officer, Aug 2019 – Oct 2020

- Designed and implemented in-house ERP solutions. This included sub-systems for accounting, inventory management, sales and purchase management, marketing insights, campaign tracking, and CRM. Additionally, I trained employees on how to use the system and documented its usage.
- Introduced Agile methodology and served as a Scrum Master, leading the Scrum team. Conducted over 50 Scrum events, both offline and online, to ensure timely and high-quality delivery of features.
- Assisted in formulating the business plan by collecting and analyzing data on product and vendor portfolios, marketing insights, brand development, pricing strategies, and quality control.
- Maintained balanced books for the company using Airtable and prepared financial statements in compliance with GAAP standards.

Technical Skills

Python, React, Bash, Docker, SQL, Git, Jira, AWS, GCP, FastAPI, Django, Flask, Beautiful Soup, Celery, Pytest, Nginx, Traefik, Elasticsearch, NoSQL, ELK stack, Redis, jQuery, Airtable, Postman, REST, GraphQL, Pandas, Scikit Learn, TensorFlow, Matplotlib, OpenCV, Airflow, HTML, CSS, Bootstrap, Material Design, Ant Design, Wix, Invision, Photoshop, Canva, JWT authentication, Jenkins, Selenium

Side Projects

Sajilo Khata

Capstone project selected for project showcase, 2021

Scalable Software-as-a-Service for Financial Accounting for small businesses.

Nepali Handwritten Character Recognition

AI project, 2020

Deep convolutional neural network for recognizing handwritten Nepali characters.

Flask-Cognito-Extended

Open-source project, 2020

Implementation of AWS Cognito authorization and authentication solution for Flask framework, including utility methods to handle JWT lifecycle and manage user attributes.

Courses and Certifications

Deep Learning Specialisation – 125 hours

DeepLearning.AI, Coursera

Introduction to Data Science in Python – 30 hours

University of Michigan, Coursera

Introduction to Self-Determination Theory:

An approach to motivation, development and wellness – 21 hours

University of Rochester, Coursera

Licensed Scrum Master – Issued Mar 2020

Scrum Inc.
